

GENFLOWS CLIENT ONBOARDING DOCUMENTATION

GTM Campaign Blueprint & Outbound Playbook

The RevOps Company

Prepared by GenFlows | May 2025

Document ID: GF-REVOPS-2025-01

CONFIDENTIAL

1. ICP DEFINITION & DOCUMENTATION

GOAL: Define exactly who the revops company's ideal customers are so every downstream decision (lead sourcing, messaging, scoring, qualification) is rooted in a precise, shared understanding of the target market.

1.1 Primary ICP Characteristics

Company Profile

Firmographic boundaries of the ideal customer for the revops company's embedded RevOps and HubSpot services.

Criteria	Details
Industries	SaaS / B2B Software, Professional Services & Consulting, Financial Services & FinTech, E-commerce & D2C, Media, Events & Publishing
Company Type	B2B or B2B-adjacent companies with a HubSpot footprint (Sales Hub, Marketing Hub, or Service Hub). Companies running revenue operations across sales, marketing, and customer success.
Geography	Primary: EU & UK. Secondary: North America.
Employees	51–5,000 (sweet spot: 100–500)
Revenue	\$1M–\$100M (sweet spot: \$10M–\$50M)
Business Context	Companies already on HubSpot (Pro or Enterprise tier) who are under-utilizing the platform, experiencing CRM decay, or scaling past their current RevOps capacity. Often lack a dedicated in-house RevOps hire.

Target Industries (TAM)

Industry	Why It's a Fit
SaaS / B2B Software	Heavy HubSpot adoption. Complex sales cycles require clean lifecycle management, lead routing, and accurate pipeline reporting. High churn risk when CRM is messy.
Professional Services & Consulting	Client lifecycle management critical. Often outgrow basic CRM setups. Revenue depends on pipeline visibility and accurate forecasting.
Financial Services & FinTech	Regulated environment demands clean data, audit trails, and reliable reporting. Multi-step sales processes need proper automation and lifecycle tracking.

E-commerce & D2C	Hybrid B2B/B2C models create CRM complexity. HubSpot Marketing Hub integrations with commerce platforms require specialized setup.
Media, Events & Publishing	Multiple revenue streams (subscriptions, ads, events) need integrated CRM. Complex audience segmentation and lifecycle automation.

Current Technology Signals (Replatforming Targets)

Current Platform / Tool	Why They're a Target
Salesforce / Pardot	Companies migrating away from Salesforce to HubSpot need expert implementation. Migration complexity creates high-value engagements.
HubSpot (underutilized)	Already paying for Pro/Enterprise but using only 20–30% of features. Highest-probability buyers: they already have the tool, just need the expertise.
Marketo / Eloqua	Legacy marketing automation users considering HubSpot for consolidation. Need migration + implementation partner.
No dedicated CRM / Spreadsheets	Companies at the inflection point of needing a real CRM. Ready to invest but lack internal expertise to set it up properly.
Dynamics 365	Companies with Dynamics looking to consolidate or migrate marketing/sales ops to HubSpot. Integration or full migration opportunities.

Stakeholder Personas

Primary Decision Makers:

- CEO / Founder / Co-Founder — Budget authority, strategic vision. Feels pain when reporting is unreliable and team can't scale.
- COO — Operational efficiency owner. Frustrated by manual processes and disconnected systems.
- CRO / VP of Revenue Operations — Directly owns revenue operations. Needs reliable pipeline data, accurate forecasting, and clean handoffs between teams.
- VP of Sales / Head of Sales — Owns the sales pipeline. Daily user of the CRM. Feels pain when reps don't trust the data or leads slip through cracks.

Secondary Influencers / Champions:

- Head of RevOps / Director of RevOps — Tactical owner of HubSpot. Evaluates tools, manages implementation. Most likely internal champion.
- Sales Operations Manager — Hands-on with workflows and reporting. Feels the daily pain of broken automations.

- VP of Marketing / Head of Marketing / Marketing Ops Manager – Needs marketing-to-sales handoff to work. Depends on lifecycle automation and attribution.
- HubSpot Administrator / CRM Manager – Day-to-day portal owner. Often the person who knows where the bodies are buried.
- Head of Growth – Cross-functional role that needs data from both sales and marketing. Advocates for operational infrastructure.

1.2 Pain Points & Objectives

GOAL: Articulate the prospect's pain points so precisely that every cold email, discovery call, and case study reference lands with immediate recognition.

Core Pain Points

- Messy HubSpot portal: Data is unreliable, workflows are broken or half-built, and the team doesn't trust the CRM. Reps work around the system instead of in it.
- No in-house HubSpot expertise: Tasks that should take 10 minutes eat entire afternoons. The team lacks the skillset to build complex workflows, integrations, or custom reports.
- Bad agency experiences: Previously hired a generalist marketing agency that didn't go deep on HubSpot, or a big agency where they paid senior rates and got junior delivery.
- Leads slipping through the cracks: No proper lead routing, lifecycle management, or automation. Leads reach the wrong rep (or no rep) and opportunities die silently.
- Leadership flying blind: Reporting is shallow, manual, or untrustworthy. Leadership can't get a clean answer on pipeline, conversion rates, or channel performance without waiting on a weekly export.
- Compounding mess: Every new hire inherits the same broken portal. The problem gets worse with growth, not better. Technical debt accumulates with each workaround.
- Feature underutilization: Paying for Sales Hub Pro or Enterprise (\$10K–\$50K+/year) but using only 20–30% of available features. Custom objects, advanced workflows, forecasting, and AI tools sit untouched.
- Fear of breaking things: Team avoids making changes to the portal because they're not sure what will break downstream. Innovation stalls.

Objectives & Success Metrics

- Clean, reliable CRM foundation: Accurate data model, proper lifecycle stages, and trusted reporting.
- Working lead routing: Leads reach the right rep at the right time, every time.
- Automated reporting: Leadership gets real-time visibility into pipeline, conversion, and channel performance without manual exports.
- Full HubSpot utilization: Unlock the 70–80% of features they're already paying for but not using.
- Reduced manual work: Automate repetitive tasks (data hygiene, lead assignment, follow-up sequences) so the team focuses on selling.
- Faster time-to-value on new hires: Clean portal means new reps onboard faster and start producing sooner.
- Ongoing optimization: Continuous improvement rather than one-and-done implementation that decays over time.

1.3 ICP Segmentation

GOAL: Create a tiered prioritization system so campaign resources are allocated proportionally to deal potential.

TIER 1 ACCOUNTS – Highest Priority

Profile: Companies on HubSpot Pro or Enterprise (Sales Hub, Marketing Hub, or Service Hub) with 100–1,000 employees, \$10M–\$100M revenue, in target industries. Visible trigger present: recent CRM migration, new C-level hire, job posting for RevOps/CRM roles, or active HubSpot-related pain signals on LinkedIn.

Why Priority: Already invested in HubSpot, already feeling the pain of underutilization or messy data. Budget exists. Pain is acute and recognizable. Fastest path to closed deal.

Typical Triggers:

- New VP Sales, CRO, or Head of RevOps hired in the last 90 days (mandate to fix operations)
- Job posting for HubSpot Administrator, RevOps Manager, or CRM Manager (need but can't fill)
- LinkedIn posts from decision makers about CRM frustrations, data quality issues, or RevOps challenges
- Recent HubSpot tier upgrade (Free to Pro, Pro to Enterprise) without implementation partner
- Migration from Salesforce, Dynamics, or legacy CRM to HubSpot announced or underway
- Funding round closed in last 6 months (budget available, scaling operations)

TIER 2 ACCOUNTS – Secondary Priority

Profile: Companies on HubSpot Pro/Enterprise in target industries, 51–500 employees, \$5M–\$50M revenue. Good firmographic fit but no visible trigger. May be underutilizing HubSpot without actively seeking help.

Approach: Semi-automated email sequences with industry-specific value props. Lead with the “20–30% utilization” insight and free HubSpot audit offer. Standard personalization.

TIER 3 ACCOUNTS – Nurture / Long-Term

Profile: Companies in target industries with 51–5,000 employees that are not yet on HubSpot but show signs of CRM dissatisfaction or platform evaluation. Also includes companies on HubSpot Free/Starter tiers not yet ready for Pro-level services.

Approach: Educational nurture content. Monitor for tier upgrades, migration signals, or RevOps hiring. Re-engage when triggers appear.

1.4 Sellable Market (SAM) – Qualification Filters

GOAL: Sharpen the TAM into the actual addressable market by defining hard filters, soft filters, and disqualification criteria. This directly feeds Clay qualification prompts and Apollo search filters.

Hard Filters (Must-Have)

- HubSpot in the tech stack (any Hub, any tier – but Pro/Enterprise preferred)
- B2B or B2B-adjacent business model (not pure B2C consumer brands)
- 51+ employees (below this, unlikely to have budget for external RevOps partner)
- Based in EU, UK, or North America
- Revenue operations span across at least sales and marketing (not single-function use of HubSpot)

Soft Filters (Strong Signals)

- HubSpot Pro or Enterprise tier (higher spend = more pain from underutilization)
- No dedicated RevOps hire on LinkedIn (HubSpot is “owned” by a generalist or shared across roles)
- Job postings for HubSpot Admin, RevOps, or CRM roles (signal they need help but can’t find it)
- Multiple HubSpot Hubs (Sales + Marketing + Service = integration complexity)
- Recent CRM migration or platform evaluation activity
- New C-level hire in revenue-facing role (first 90 days)
- Funding round in last 12 months (budget and scaling pressure)

Disqualification Criteria

- Not on HubSpot and not evaluating HubSpot (no platform fit)
- Pure B2C consumer brand with no B2B revenue operations
- Fewer than 20 employees (unlikely to have budget or operational complexity)
- Already has a dedicated, senior RevOps team in-house (3+ people – low need for external partner)
- Current HubSpot Solutions Partner agency relationship in place (conflict)
- Only wants hourly or ad-hoc support (engagement model mismatch – Kevin works project-based or retainer only)
- Revenue below \$1M (too early-stage for the service)

2. TRIGGER MAPPING & LEAD SCORING

GOAL: Identify the specific events, signals, and behavioral changes that indicate a prospect is in an active buying window, then assign weighted scores for campaign prioritization.

2.1 High-Intent Triggers

Company-Level Signals

Strategic Inflection Points (HIGHEST INTENT):

- CRM migration announced or underway (Salesforce/Dynamics/legacy to HubSpot)
- HubSpot tier upgrade (Free/Starter to Pro, or Pro to Enterprise) without implementation partner
- New CRO, VP Sales, VP RevOps, or Head of RevOps hired in last 90 days
- Acquisition or merger (portal consolidation, CRM integration required)
- Funding round closed in last 6 months (scaling operations, budget available)
- Fired or parted ways with previous HubSpot agency (actively looking for replacement)

Operational Signals (MEDIUM-HIGH INTENT):

- Job posting for HubSpot Admin, RevOps Manager, CRM Manager, or Sales Ops role
- Multiple open roles in revenue-facing departments (scaling = operational stress on CRM)
- HubSpot certification activity from non-technical staff (team trying to self-serve)
- Conference attendance at INBOUND, SaaStr, or RevOps-focused events
- Budget allocation for sales/marketing tech stack (visible in job postings or press)

Content & Activity Signals:

- LinkedIn posts from decision makers about HubSpot frustrations, CRM challenges, or RevOps strategy
- Engagement with HubSpot ecosystem content (partner directory, community forums, HubSpot Academy)
- Website visits to the revops company's site via Leadinfo or similar

Role-Level Signals

- New in role (first 90 days) – mandate to improve, evaluating partners
- LinkedIn posts about transformation agenda, cleaning up tech stack, or building RevOps function
- Speaking or attending events about HubSpot, RevOps, or revenue operations
- Published content about CRM challenges or marketing/sales alignment

Market-Level Signals

- Industry peer announces HubSpot migration or RevOps transformation

- HubSpot releases major new features (AI tools, custom objects updates) — creates awareness gap
- Competitor platform price increases or end-of-life announcements (Salesforce pricing changes, Marketo consolidation)

2.2 Trigger Priority Matrix

Priority Level	Triggers & Response Time
Immediate Action (24–48 hrs)	CRM migration underway New CRO/VP RevOps hired (first 30 days) Fired previous agency HubSpot tier upgrade without partner Funding round closed LinkedIn post about acute CRM pain
Medium-Term (1–2 weeks)	Job posting for RevOps/HubSpot roles Multiple revenue team hires Conference attendance New C-level hire (31–90 days) Competitor platform changes
Long-Term Monitoring (Quarterly)	Industry peer CRM migration HubSpot feature releases General scaling signals HubSpot certification activity from non-technical staff

2.3 Lead Scoring Framework

GOAL: Points-based scoring system (0–100) combining firmographic fit, intent signals, and pain/timing to classify leads as Hot, Warm, Qualified, or Cold.

Firmographic Score (40 points max)

Criteria	Points
Revenue \$10M–\$100M (sweet spot)	+15 pts
Revenue \$5M–\$10M or \$1M–\$5M	+8 pts
Employees 100–500 (sweet spot)	+10 pts
Employees 51–99 or 501–5,000	+5 pts
Target geography (EU, UK, NA)	+5 pts
Target industry (SaaS, Prof Services, FinTech, E-comm, Media)	+5 pts
HubSpot Pro or Enterprise confirmed	+5 pts

Intent Score (40 points max)

Criteria	Points
CRM migration underway or announced	+15 pts
New CRO/VP RevOps/Head of RevOps (last 90 days)	+12 pts
Job posting for HubSpot Admin/RevOps/CRM role	+10 pts
HubSpot tier upgrade without partner	+10 pts

Fired previous agency	+10 pts
LinkedIn post about CRM/RevOps pain	+8 pts
Funding round (last 6 months)	+5 pts
Conference attendance (INBOUND, SaaStr)	+3 pts

Pain/Timing Score (20 points max)

Criteria	Points
No dedicated RevOps hire visible on LinkedIn	+8 pts
Multiple HubSpot Hubs (complexity signal)	+5 pts
Scaling rapidly (multiple open roles)	+4 pts
Q1 or Q4 (budget planning/new year)	+3 pts

Threshold Definitions

Score Range	Classification & Action
80–100 pts = HOT LEAD	Immediate personalized outreach. Multi-channel: email + LinkedIn + phone. Manual research + deep personalization.
60–79 pts = WARM LEAD	Standard sequence with high personalization. Trigger-based opening lines. Case study focus.
40–59 pts = QUALIFIED LEAD	Standard sequence, moderate personalization. Industry-specific value props. Free audit offer.
20–39 pts = COLD LEAD	Basic sequence. Educational content (utilization insight). Longer nurture.
< 20 pts = UNQUALIFIED	Review for disqualification or long-term nurture list.

3. ANGLES OF ATTACK STRATEGY

GOAL: Define the messaging pillars and campaign angles that connect the revops company's solution to the prospect's pain.

3.1 Value Proposition Framework

PILLAR 1: YOU'RE PAYING FOR IT — USE IT

Pain: Companies are spending \$10K–\$50K+/year on HubSpot Pro or Enterprise but using only 20–30% of the platform's capabilities. Custom objects, advanced workflows, forecasting, and AI tools sit untouched.

Solution: the revops company audits the portal, identifies the untapped features they're already paying for, and implements the workflows, automations, and reporting that justify the price tag.

Proof: HubSpot Platinum Solutions Partner with Software Expertise badge. Certified HubSpot Trainer and AI Partner Advisory Council member.

PILLAR 2: SENIOR-ONLY, FOUNDER-LED DELIVERY

Pain: Previous agency experiences delivered junior execution at senior prices. Account managers who don't understand HubSpot deeply. Offshore handoffs. Scope games.

Solution: Kevin delivers every engagement personally. No account managers, no juniors, no offshore handoffs. Small client roster means each company gets real attention and deep expertise.

Proof: Founder-led practice. HubSpot Platinum Partner credentials. Direct client relationships with zero handoff friction.

PILLAR 3: REPLACE THE HIRE YOU CAN'T MAKE

Pain: Need a senior RevOps hire but can't find one, can't afford one (€80–120K loaded), or can't justify the risk of a bad hire. Meanwhile the CRM keeps decaying.

Solution: the revops company replaces the cost of a full-time RevOps hire with a flexible retainer. No recruiting, no onboarding, no risk. Better value than a generalist agency, better quality than a big agency.

Proof: Retainer model with long-term client retention. Clients stick because the honesty and quality of delivery is consistent.

Pain Point to Solution Mapping

Pain Point	Solution	Outcome
Portal is messy, data unreliable	Foundation fix: data model, lifecycle, lead routing, reporting cleanup	Reps trust the CRM, leadership gets clean pipeline visibility

No in-house HubSpot expertise	Embedded RevOps partner on retainer	Complex tasks handled in minutes vs. afternoons. Continuous improvement.
Bad agency experience (junior delivery)	Founder-led, senior-only delivery	Consistent quality, direct relationship, zero handoff friction
Leads slipping through the cracks	Proper lead routing + lifecycle automation	Right lead, right rep, right time. Zero leaked opportunities.
Paying for HubSpot but not using it	Audit + unlock underutilized features	Full ROI on HubSpot investment. Features justify the price tag.
Full-time RevOps hire too expensive	Flexible retainer model	Senior RevOps capability at fraction of full-time cost

Differentiation vs. Competitors

vs. Competitor	They Do	the revops company Does
Generalist marketing agency	Surface-level HubSpot setup. Focus on marketing, not RevOps. Don't go deep on CRM.	Deep HubSpot specialization. Full RevOps scope: data model, lifecycle, routing, reporting, integrations.
Big HubSpot agency (e.g., New Breed, SmartBug)	Pay senior rates, get junior delivery. Account manager buffer. Cookie-cutter playbooks.	Founder-led delivery. Direct access to the person doing the work. Custom approach per client.
Freelance HubSpot consultant	Narrow scope (usually just one Hub). No long-term commitment or ongoing optimization.	Full-stack RevOps partner. Project + retainer model. Ongoing optimization, not one-and-done.
In-house RevOps hire	Single point of failure. €80–120K loaded. 3–6 month ramp. Risk of bad hire.	Flexible retainer. No recruiting, no onboarding. Immediate expertise. Easy to scale up/down.

3.2 Campaign Angles

ANGLE 1: The Utilization Gap – Insight Hook

Target: VP Sales, CRO, CEO at companies on HubSpot Pro/Enterprise (100–1,000 employees).

Core Message: You're spending \$X/year on HubSpot but using a fraction of what's there. The ROI isn't in buying more software — it's in using what you already have.

Hook Examples:

- "Most companies on HubSpot Enterprise use about 25% of it. Curious where {{company_name}} lands."
- "{{first_name}}, quick question — when's the last time someone audited your HubSpot portal?"
- "The features that justify your HubSpot spend are probably sitting untouched. Worth a look?"

Expected reply rate: 4–6%

ANGLE 2: The Broken Foundation – Pain Hook

Target: Head of RevOps, Sales Ops Manager, HubSpot Admin at companies showing operational pain signals.

Core Message: When reps don't trust the CRM, leads slip, and reporting takes hours instead of minutes — the problem isn't the team, it's the foundation.

Hook Examples:

- "{{first_name}}, if your sales team could get a clean pipeline view in one click instead of a weekly export — would that change anything?"
- "Talked to a Head of Sales last week who said their reps spend more time fighting HubSpot than selling. Sound familiar?"
- "When a 10-minute workflow takes your team an afternoon, the problem compounds faster than most people realize."

Expected reply rate: 3–5%

ANGLE 3: The RevOps Hire Alternative – Cost Hook

Target: CEO, COO, CFO at companies hiring for or struggling to fill RevOps/HubSpot roles.

Core Message: A senior RevOps hire costs €80–120K and takes months to ramp. A retainer partner delivers the same output this week, at a fraction of the cost.

Hook Examples:

- "{{first_name}}, saw you're hiring for a {{job_title_signal}}. What if you could get that output on a flexible retainer instead?"
- "Filling a RevOps role takes 3–6 months. Your CRM doesn't wait that long to decay."
- "Most of our clients started by trying to hire. The ones who switched to a retainer got to value faster."

Expected reply rate: 3–5%

3.3 Personalization Strategy

GOAL: Define three levels of personalization that scale with lead score.

Level	Description & Variables
Level 1: Basic (All Emails)	{{first_name}}, {{company_name}}, {{job_title}}, {{industry}}. Standard merge tags in all sequences.
Level 2: Trigger-Based (Warm/Hot)	Trigger-specific opening lines: HubSpot tier detected, job posting for RevOps/CRM role, new C-level hire, CRM migration signal, LinkedIn post about CRM pain. Generated via Clay AI prompts.
Level 3: AI-Generated (Top Leads)	Deep personalization: HubSpot tech stack analysis (which Hubs, which tier), website analysis for operational maturity signals, competitive context (current vs. potential CRM setup), role-specific pain mapping. Generated via Clay AI prompts with company scraping.

Scalability Matrix

Lead Score	Approach
80–100 (Hot)	Semi-automated + manual research. Multi-channel: email + LinkedIn. Trigger-based personalization + AI-generated deep personalization.
60–79 (Warm)	Semi-automated. Email-focused with trigger-based personalization. Case study matching by industry.
40–59 (Qualified)	Fully automated. Basic personalization + industry-specific value props. Free audit offer.
< 40 (Cold)	Fully automated. Educational content (utilization insight). Longer nurture cycle.

4. CAMPAIGN ARCHITECTURE BLUEPRINT

GOAL: Design the exact email sequences, touchpoint cadence, and reply handling logic.

4.1 Sequence Structure

Primary Sequence: The Utilization Gap (Angle 1)

Day	Touchpoint	Channel	Content Focus
0	Email 1	Email	Utilization insight hook + free audit offer + soft CTA
3	Follow-up 1	Email (thread)	Add proof: HubSpot Platinum Partner credentials + specific outcome
5	LinkedIn	LinkedIn	Profile visit + connection request (hot leads only)
7	Email 2	Email (new)	Shift angle: broken foundation pain + time savings value prop
10	Follow-up 2	Email (thread)	Strategic question to start dialogue
14	Email 3	Email (new)	Case study: migration/implementation before/after
17	Follow-up 3	Email (thread)	Break-up: final audit offer + soft close

Email Templates

Email 1 (Day 0) – Utilization Gap

Subject: {{first_name}} hubspot

Hey {{first_name}},

{{personalization_line}}

Most companies on HubSpot Pro or Enterprise use about 20–30% of what they're paying for. The features that justify the price tag – custom objects, advanced workflows, proper forecasting – usually sit untouched.

We run a free portal audit that shows exactly where the gaps are and what quick wins you can action immediately.

Worth a look for {{company_name}}?

Follow-up 1 (Day 3) – Proof

Forgot to mention – we're a HubSpot Platinum Solutions Partner and certified Trainer, so the audit isn't a surface-level checklist. We review data hygiene, lifecycle setup, lead routing, automation health, and reporting.

You get a written report with prioritized recommendations, whether you work with us or not.

Email 2 (Day 7) – Broken Foundation

Subject: quick question

Hey {{first_name}},

Curious – when something complex lands on your team's plate in HubSpot (a multi-step workflow, a custom report, an integration), how long does it take?

We hear from a lot of teams that stuff that takes us 10 minutes eats their entire afternoon. Not because the team isn't sharp – just because deep HubSpot expertise isn't their job.

If that sounds familiar, happy to share how we handle it for similar companies.

Email 3 (Day 14) – Case Study

Subject: {{first_name}} example

Hey {{first_name}},

Recently helped a media group consolidate from one HubSpot portal to four, with Dynamics integration, across multiple countries. Clean migration, zero data loss, and the team was operational from day one.

If {{company_name}} is dealing with CRM complexity at any level, happy to walk through how we approach it.

Follow-up 3 (Day 17) – Break-Up

Hey {{first_name}}, I'll keep this short.

If the timing isn't right, no worries at all. The free audit offer stays open if things change down the line.

Either way — happy to be a resource if HubSpot questions come up. I'm an email away.

4.2 Reply Handling & Follow-Up Logic

Reply Type	Response Protocol
Positive Reply	Respond within 2 hours. Offer scheduling link for intro call / audit walkthrough. Update CRM stage to Interested. Personalize reply based on their specific situation.
Neutral / Question	Answer directly and specifically. Offer the free audit as a concrete next step. Include one relevant proof point. Keep it conversational.
Objection	See objection handling framework below. Never argue. Redirect to value or acknowledge fit mismatch.
No Reply After Sequence	Tag as Nurture in CRM. Re-engage after 90 days with new trigger or new angle. Monitor for job changes, LinkedIn activity, or HubSpot-related signals.

Objection Handling

Objection	Response Strategy
"We only need hourly/ad-hoc support"	Acknowledge the preference honestly. Explain that the project/retainer model is what ensures quality and continuity. If it's truly not a fit, offer to refer them to a more flexible alternative. Leave the door open.
"Too expensive / not in budget"	Don't discount. Reframe against the cost of a full-time RevOps hire (€80–120K) or the cost of the current situation (leaked leads, wasted HubSpot spend, manual reporting). If budget genuinely isn't there, say so and offer to reconnect when timing changes.
"We're handling it in-house"	Respect it. Ask: "How confident is your team in the data and reports they're using to make decisions?" If they hesitate, offer the free audit as a no-risk validation.
"We already have an agency"	Ask what's working and what's not. If they're happy, back off gracefully. If there's frustration, position the audit as a second opinion. Never badmouth the competitor.
"Not a priority right now"	Acknowledge timing. Ask: "When do you typically review your tech stack / operations?" Offer to reconnect at that time. Tag as Nurture with a timed follow-up.

4.3 A/B Testing Framework

Week 1–2: Initial Launch Tests

- Test 1: Subject Lines – "{{first_name}} hubspot" vs. "quick question" vs. "{{first_name}} revops"
- Test 2: Opening Line – Utilization insight vs. trigger-based personalization vs. direct pain question
- Test 3: CTA – Free audit offer vs. recognition question ("Is that something you're running into?") vs. content offer

Decision Criteria

After 200 sends per variant: evaluate performance. Reply rate $< 3\%$ = test new angles.
Positive reply rate $< 1.5\%$ = review ICP fit. Scale at $> 6\%$ reply + $> 2.5\%$ positive reply over 500+ sends. Kill at $< 2\%$ reply after 500 sends.

5. CASE STUDY INVENTORY

GOAL: Document all available case studies for matching to prospects by industry, pain point, and company size.

CASE STUDY 1: Multi-Portal CRM Migration – Media & Events – FLAGSHIP

Challenge: UK media and events group expanding operations, running on one HubSpot portal that couldn't scale. Needed to consolidate and expand from one portal to four with Dynamics integration across multiple entities.

Solution: Full multi-portal CRM migration and consolidation. Set up four HubSpot portals with proper data architecture, integrated with Dynamics, and ensured clean data migration with zero data loss.

Result: Clean migration with zero data loss. Multiple entities operational on day one. Scalable multi-portal architecture in place.

[NEEDS INPUT] Quantifiable metrics needed: reduction in manual processes, time saved, revenue impact, or adoption rates.

Best for: All angles – flagship case study demonstrating migration complexity and senior-level execution.

CASE STUDY 2: Payment Portal Migration – Financial Services / Associations

Challenge: Payments industry association needed to migrate their HubSpot payment portal without disrupting active member subscriptions. High-stakes migration with zero tolerance for payment interruption.

Solution: Executed the portal migration with careful subscription continuity planning. Maintained all member subscriptions active throughout the transition.

Result: Successful migration executed without disrupting any member subscriptions. Zero payment interruptions during transition.

[NEEDS INPUT] Quantifiable metrics: number of members migrated, subscription revenue preserved, timeline.

Best for: Angle 2 (Broken Foundation) and financial services targeting. Demonstrates high-stakes execution capability.

CASE STUDY 3: Marketing Hub Enterprise Implementation – Non-Profit / Global

Challenge: Global non-profit organization needed to migrate off Salesforce/Pardot onto HubSpot Marketing Hub Enterprise. Complex data migration with legacy systems and global team coordination.

Solution: Full Marketing Hub Enterprise implementation. Migrated all data and workflows from Salesforce/Pardot to HubSpot. Set up the marketing automation, reporting, and team workflows for a global organization.

Result: Successful migration from Salesforce/Pardot to HubSpot. Global team operational on new platform.

[NEEDS INPUT] Quantifiable metrics: reduced HubSpot seat costs, faster reporting cycles, user adoption rates, reduction in marketing ops manual work.

Best for: Angle 1 (Utilization Gap) and Angle 3 (Replace the Hire). Demonstrates enterprise-scale implementation and Salesforce migration expertise.

6. COPYWRITING BEST PRACTICES

GOAL: Establish client-specific writing guidelines so every email sounds consistent and follows cold email deliverability best practices.

6.1 Tone of Voice

Language: English. Professional but direct. No fluff, no corporate speak.

Tone: Direct, honest, and concrete. Commercially straightforward. Backed by credentials and real outcomes, never vague promises. Mirrors Kevin's personal style: confident without being pushy, transparent about fit (including when it's not a fit).

Use: practical, proven, concrete, honest, senior, deep, hands-on, clean, reliable

Avoid: innovative, revolutionary, world-class, cutting-edge, best-in-class, synergy, disruptive, game-changing, scalable solution (as buzzword)

6.2 Subject Line Rules

Max 3 words. Lowercase (no capitals unless proper noun). No clickbait, no emojis. Prospect first name + mismatched case performs best. Hint at value or topic.

6.3 Email Body Rules

Max 70–90 words per email (optimal range per benchmark data). One idea per email. Open with something personal or relevant. Close with a value-based CTA (not a meeting request in Email 1). Plain text only. No HTML, no images, no attachments in first 2 emails. Max 2–3 sentences per paragraph.

6.4 CTA Framework

Email	CTA Type
Email 1	Recognition question + free audit offer ("Worth a look for {{company_name}}?")
Email 2	Dialogue starter ("If that sounds familiar, happy to share how we handle it.")
Email 3	Case study + direct question ("Happy to walk through how we approach it.")
Break-up	Soft close ("I'm an email away if HubSpot questions come up.")

6.5 Do's & Don'ts

DO's	DON'Ts
Lead with recognizable HubSpot-specific pain	No feature dumping or product lists in first email

Reference HubSpot tier/usage as conversation starter	No generic SaaS cold email language
Use the free audit as a concrete, low-friction offer	No hard meeting request in Email 1
Be honest about fit (including when it's not a fit)	No badmouthing competitors by name
Back claims with credentials (Platinum Partner, Trainer, AI PAC)	No vague promises ("we'll transform your operations")
Keep it conversational and direct (mirror Kevin's voice)	No long emails without a specific value prop or CTA

7. DISCOVERY QUESTIONS & OBJECTION HANDLING

GOAL: Arm Kevin with the exact questions to ask when a prospect replies positively, organized by discovery category.

7.1 Discovery Questions

Situation & Current Setup

- Which HubSpot Hubs are you on, and at what tier (Pro, Enterprise)?
- How long have you had the portal, and who set it up originally?
- Do you have someone in-house who owns HubSpot, or is it shared across roles?
- What have you tried before – in-house, agency, freelancer – and what did or didn't work?

Pain & Bottlenecks

- What's working well, and what's frustrating you about the current setup?
- Are there workflows, automations, or integrations that break or that you don't fully trust?
- How confident are you in the data, and in the reports your team uses to make decisions?
- Are there features or tools you're paying for but not really using?

Impact & Urgency

- What does the current setup cost you in time, missed leads, or unreliable data?
- If nothing changes in the next 6 months, what's the impact on your revenue operations?
- Is there a specific initiative or deadline driving the need to fix this now?
- What would a "clean" CRM mean for your leadership team's decision-making?

Decision-Making

- Who else would be involved in a decision to bring on an external RevOps partner?
- Have you scoped a budget for this kind of work, or would we need to build a business case together?
- Are you evaluating other partners or solutions in parallel?
- What would a successful first 90 days look like for you?

8. TRIGGER SYSTEMS & CLAY INFRASTRUCTURE

GOAL: Design the always-on monitoring systems in Clay that continuously identify new leads, detect buying signals, and feed qualified prospects into campaigns automatically.

8.1 Data Sources for Lead Building

Company Discovery & Identification

- Apollo.io: Company + contact search with industry, size, location, and technology filters. Primary source for building initial lead lists.
- BuiltWith / Wappalyzer: HubSpot technology detection (confirm HubSpot usage, identify tier where possible).
- LinkedIn Sales Navigator: Job title search, company growth signals, new hire detection.
- HubSpot Partner Directory: Identify companies publicly listed as HubSpot users.
- Clay: Orchestration layer connecting all data sources, AI qualification, and enrichment workflows.

Contact Enrichment

- Apollo.io: Direct email finding + verification.
- Dropcontact: EU-compliant email finding (GDPR-friendly for EU targets).
- LinkedIn: Title verification, tenure in role, activity signals.
- Million Verifier: Email validation layer before sending.

Intent & Trigger Monitoring

- Leadinfo: Real-time website visitors to the revops company's site (if implemented).
- Google Jobs API via Clay: Job posting monitoring for HubSpot Admin, RevOps, CRM Manager keywords.
- LinkedIn Activity Monitoring: Decision maker posts about CRM/RevOps challenges.
- BuiltWith: Technology changes (CRM switches, HubSpot tier upgrades).

8.2 Evergreen Trigger Systems

TRIGGER 1: HubSpot Utilization Monitor

What: Monitor target companies confirmed on HubSpot Pro/Enterprise for signs of underutilization.

Signals: No dedicated RevOps hire on LinkedIn, HubSpot Admin role shared across titles, job postings for CRM help.

Source: Apollo + LinkedIn + BuiltWith via Clay.

Action: Score and enrich. At threshold (60+ points), add to Angle 1 (Utilization Gap) campaign.

TRIGGER 2: RevOps Hiring Signal

What: Monitor for companies posting jobs for HubSpot Admin, RevOps Manager, Sales Ops, or CRM Manager roles.

Signals: Job posting keywords: HubSpot, RevOps, CRM, Sales Operations, Marketing Operations.

Source: Google Jobs API + LinkedIn via Clay.

Action: Score and enrich. Add to Angle 3 (Replace the Hire) campaign. Extract goals from job description for personalization.

TRIGGER 3: Leadership Change Monitor

What: Track new hires in CRO, VP Sales, VP RevOps, Head of RevOps roles at target companies.

Signals: New role start date within last 90 days. First 30 days = highest priority.

Source: Apollo + LinkedIn via Clay.

Action: Score and enrich. At threshold, add to multi-channel outreach (email + LinkedIn). Personalize around new mandate.

TRIGGER 4: CRM Migration / Platform Switch

What: Monitor for companies migrating to or from HubSpot (Salesforce to HubSpot, or consolidating multiple CRMs).

Signals: BuiltWith technology changes, LinkedIn posts about migration, job postings mentioning CRM migration.

Source: BuiltWith + LinkedIn + Google Jobs API via Clay.

Action: Highest-priority trigger. Immediate outreach within 24–48 hours. Multi-channel.

TRIGGER 5: Closed-Lost Retargeting

What: Re-engage prospects who previously showed interest but didn't convert.

Signals: New trigger appears (job posting, leadership change, LinkedIn activity) for a previously contacted prospect.

Source: CRM closed-lost list + Clay trigger monitoring.

Action: Re-engage with new angle based on the new trigger. Reference previous conversation if appropriate.

8.3 CRM Data Optimization

[NEEDS INPUT] Kevin to confirm which CRM he uses for tracking outbound prospects (HubSpot assumed). Define: ICP Scoring field (0–100), lifecycle stage mapping, Clay-CRM sync configuration, suppression list criteria, and duplicate prevention rules.

9. SUCCESS METRICS & KPIs

GOAL: Define the exact metrics, targets, and decision points for objective performance measurement.

Email-Level Metrics

Metric	Target
Reply rate (overall)	>4%
Reply rate (hot leads)	>7%
Positive reply rate	>2%
Bounce rate	<3%
Unsubscribe rate	<0.3%

Benchmarks (GrowthEngineX data, 1,517 campaigns, 44K+ positive responses): Excellent = 1 positive reply per 150 contacts. Above average = 150–400. Average = 450–800. Below average = 800–1,200. Poor = 1,200+.

Sequence-Level Metrics

Metric	Target
Meeting booking rate	>1.5% of total sends
Qualified opportunity rate	>0.8%

Campaign-Level Metrics

[NEEDS INPUT] Kevin to define: target monthly meeting volume, cost per meeting threshold, pipeline value targets, and SQL conversion rate goals.

Decision Points

Decision	Criteria
Iterate	After 200 sends per variant if performance lags targets
Scale	At >6% reply + >2.5% positive reply over 500+ sends
Kill	At <2% reply after 500 sends

10. CAMPAIGN EXECUTION CHECKLIST

GOAL: Week-by-week execution roadmap from strategy to live campaigns.

Week 1–2: Foundation

- ☐ ICP Definition finalized (Tier 1/2/3 segmentation)
- ☐ Trigger Mapping validated (priority triggers + lead scoring)
- ☐ Campaign angles confirmed (3 angles with hooks)
- ☐ Sequence structure approved (email cadence + multi-channel for hot leads)
- ☐ Case study inventory documented
- ☐ Discovery questions + objection handling framework built
- ☐ Copywriting best practices and tone of voice established
- ☐ Clay workspace setup and infrastructure configuration
- ☐ CRM audit and ICP scoring implementation
- ☐ Booking link created by Kevin

Week 3–4: Trigger Systems & Launch Prep

Lead Sourcing

- ☐ Build lead lists in Clay/Apollo using ICP + triggers
- ☐ Segment by lead score (Hot/Warm/Qualified/Cold)
- ☐ Enrich with trigger data (HubSpot tier, hiring, leadership changes)
- ☐ Export batches for campaign upload to sending tool

Copywriting

- ☐ Draft all sequence variants (per angle)
- ☐ Write subject line variants for A/B testing
- ☐ Create trigger-based personalization templates
- ☐ Write AI personalization prompts for top leads (Clay)
- ☐ Review and approval with Kevin

Campaign Setup

- ☐ Build sequences in sending tool (SmartLead / Instantly / EmailBison)
- ☐ Configure A/B test variants
- ☐ Set up trigger-based automation
- ☐ Set up multi-channel workflows for hot leads

Week 5+: Launch & Optimization

QA & Testing

- ☐ Send test emails to internal team
- ☐ Verify personalization tokens

- ☐ Check deliverability (no tracking links, no HTML, plain text)
- ☐ Test multi-channel sequences

Launch

- ☐ Launch Batch 1: Hot leads (80+) with multi-channel
- ☐ Launch Batch 2: Warm leads (60–79) with standard sequence
- ☐ Monitor first 48 hours for deliverability issues
- ☐ Adjust based on initial reply rates

Optimization

- ☐ Review performance after 200 sends per variant
- ☐ Scale winning variants
- ☐ Iterate or kill underperforming variants
- ☐ Set up weekly performance reviews with Kevin
